Fordyce points are small yellowish white spots that are usually found on the edges of the labs or inside the cheeks. These points usually cause concern, because they can also appear in pãªnis or vaginal labs. Come on, learn more about the Fordyce points! Fordyce points are a normal, harmless condition, do not cause pain, not contagious and disappear by themselves. Based on research, about 8 out of 10 adults have experienced or even had Fordyce points on their body. Where did Fordyce come from? Fordyce points are increased ãlelopuses. However, the sebamous glans usually are around the hair, while the fordyce points grow in the skin area that is not hair. Generally, these points measure about 1 - 3 milham or may be higher. Fordyce's points really existed long before the presence of these points, namely, from birth. Generally, the size of Fordyce points increases in adolescent or puberty, so it is more fanciful to recognize. These points may appear separately on the skin, groups in a skin area or also one by one can occur. This condition is more risky experienced by people with oily skin. If you find Fordyce points in certain parts of your body, try to pull or press the points that appear. This all can cause injuries and infection. Fordyce Points to Maradans Sex organ in women, Fordyce pots may appear around the genital and vagina -ribs. Fordyce points can also appear around male sexual themselves, for example, in the scrotum and the stem of the Panis. Fordyce points usually do not require special treatment because they will disappear in their own time. However, if you want to get rid of points that seem to improve the appearance and increase self -confidence, there are some Doctor that can be done, including: treatment with a medical laser can eliminate the Fordyce points on the skin using the help of laser beams. However, in some people, this procedure can leave marks on the skin. Micro-soak surgery to remove Fordyce points quickly and effectively, doctors can do micro-soco surgery. This surgery is done using a medical device that resembles a pen. This serves to flatten the skin again and remove unwanted tissues. Topic treatment of various types of topical medications or topics used to eliminate points of Fordyce, among others, vitamin-derived medicines A, like topical tretinoin and oral isotretinoin. However, its use should be in accordance with the advice of the doctor, because these medications may cause side effects in the form of skin that feel warm and inflammation. You do not need to worry if you have fordyce in your body, because in fact these bitnies are not a disease. However, if this makes you feel uncomfortable and confident, you can consult a doctor about the right care to eliminate it. What is this lump in my penis? "NHS. (2018). Kamu tentu tidak perlu mengukurnya. Secara sekilas ini biasa dijumpai secara terpisah maupun berkelompok pada satu titik bagian tubuh tertentu, seperti: Batang penis dan skrotum Titik wajah di mana bibir dan kulit bertemu (ujung bibir) yang dikenal sebagai perbatasan vermilion Labia Dalam bibir dan pipi Umumnya bintik ini dikelilingi oleh warna kuning, putih, merah pucat, atau bahkan berwarna serupa kulit. Pada bagian genital seperti batang penis, skrotum, dan labia, Fordyce spot tampak serupa papula merah terang, ungu, atau pucat. Kamu bisa melihat bintik-bintik ini dengan jelas ketika kulit diregangkan.Bintik Fordyce di bagian tubuh luar tidak berefek apa pun. Sedangkan pada bagian genital, beberapa kasus yang jarang ditemukan bintik Fordyce dapat terluka dan berdarah ketika berhubungan seksual.Ã ÂNamun tenang, ini tidak menandakan penyakit serius atau komplikasi fisik tertentu. Kamu bisa menghubungi dokter jika sering mengalaminya.Ã ÂMeski tidak mengidentifikasikan penyakit kulit tertentu, terdapat beberapa kondisi serius yang mungkin mirip dengan tampilan Fordyce spot. Sebagai catatan, bukan disebabkan oleh bintik Fordyce, ya!Salah satu kondisi kesehatan yang mungkin ditandai dengan adanya Fordyce spot yakni kanker kolorektal atau kanker bagian usus besar. Publikasi penelitian pada Journal of Medical Case Reports menemukan bahwa peserta dengan warisan kanker kolorektal juga memiliki bintik-bintik Fordyce di mulut.Penelitian lain yang termuat dalam Dental Research Journal menyebutkan jumlah besar bintik Fordyce di mulut mungkin terkait dengan hiperlipidemia. Kondisi ini merupakan gejala kesehatan terkait peningkatan kadar lemak dalam darah.Ã ÂLebih lanjut dilansir Healthline, timbulnya bintik yang mungkin terjadi bersamaan gejala gejala lain dapat menjadi indikator: Kista milium yang berbentuk keras, putih, benjolan bulat yang dapat berkembang di wajah. Hiperplasia sebaceous, suatu kondisi yang dapat menyebabkan terbentuknya benjolan kecil dan lunak. Kista epidermoid, yang merupakan benjolan kecil dan keras yang dapat terbentuk di bawah kulit. Karsinoma sel basal, sejenis kanker kulit yang dapat muncul sebagai benjolan, bercak merah, atau pertumbuhan lainnya. Kutil kelamin dan penyakit menular seksual lain jika bintik berada di area genital. Kunjungan ke dokter dan tindakan biopsi tertentu yang mungkin diperlukan guna mendapatkan diagnosis lebih lanjut. Jangan panik dengan mendiagnosis diri sendiri tanpa bantuan profesional, ya.ilustrasi perawatan topikal (Pexels.com/Ron Lach)Meski mirip dengan kondisi kesehatan lain, bintik Fordyce tidak berbahaya. Mereka tidak disebabkan oleh penyakit apa pun dan tidak perlu pengobatan.Dalam banyak kasus, mereka bahkan tidak terlihat. Namun, terdapat pula yang sangat tampak dan mungkin tidak sedap dipandang.Jika kamu mendapati bintik Fordyce yang mengganggu penampilan, opsi terbaik untuk menghilangkannya yakni dengan terapi kosmetik. Terdapat perawatan khusus yang bisa membantu kamu memudarkan atau meniadakan sama sekali bintik Fordyce.Operasi micro-punchÃ Prosedur operasi ini diawali dengan anestesi lokal untuk mengurangi rasa sakit. Kemudian dokter akan menggunakan alat kecil berbentuk serupa pena untuk ¢ÃÂÂmeninju¢ÃÂÂ kulit dan menghilangkan jaringan yang tidak diinginkan.Operasi micro-punch tidak meninggalkan bekas. Bahkan peserta penelitian yang mendapatkan operasi ini tidak menunjukkan tanda-tanda munculnya Fordyce spot selama setahun, melansir Journal of Plastic, Reconstructive & Aesthetic Surgery.Perawatan laserPilihan lain guna menghilangkan Fordyce spot yakni perawatan laser. Dokter akan menggunakan laser karbon dioksida guna menekan bintik-bintik yang ada.
